By SAM DAWSON

It seems everyone has his own favorite whipping boy for the troubles afflicting the labor force. In the case of New York City, that boy is the auto worker.

But it isn't only the auto worker who is being blamed. Many also believe that the problem is caused by the automobile itself. And many blame the automobile industry for being responsible for the increase in total employment over the past 10 years.

Some believe that the increase in the number of people employed in the automobile industry is due to the increase in the demand for automobiles. Others believe that the increase is due to the increase in the number of people employed in the production of automobiles.

The increase in the number of people employed in the automobile industry has led to a decrease in the number of people employed in other industries. This has caused a decrease in the demand for labor in the non-automobile industries, which has led to a decrease in the demand for labor in the automobile industry.

The decrease in the demand for labor in the automobile industry has led to a decrease in the wages of auto workers. This has led to a decrease in the purchasing power of auto workers, which has led to a decrease in the demand for products made by auto workers.

The decrease in the demand for products made by auto workers has led to a decrease in the demand for labor in the auto industry, which has led to a decrease in the number of people employed in the auto industry. This has led to a decrease in the demand for labor in the non-automobile industries, which has led to a decrease in the demand for labor in the automobile industry.
