Learn how many servings can be expected from each kind of food you buy, and you will go a long way toward economical management of the food supply. Buy by weight or number when you can.

A freshly spilled liquid should never be rubbed from a carpet or rug because this only drives the liquid into the fabric. Instead, cover the liquid with corn meal, talcum powder, blotting paper torn to bits, or any other absorbent material which will take it up and prevent its spreading.

Butterscotch flavor is made by melting together 1 cup of brown sugar and 2 tablespoons of butter until the mixture is waxy. It can then be used in many delicious confections.

How a sunny day in Jamestown keeps electric bills low

WHEN it rains, lights are lighted. Immediately more wheels must turn—more electric energy must be used—in the electric power plants.

Through the interconnection of all the power plants in the Buffalo, Niagara and Eastern Power System, the "sunny towns" help the "rainy towns".

If it is raining in Buffalo and the sun is shining in Jamestown, the electric energy not needed there is diverted to Buffalo. Thus power is conserved—expense of equipment is kept at a minimum—all over the system.

And so, your electricity is cheap. It is the biggest bargain you buy. Use it freely.
