A mandatory and additional prison sentence for persons convicted of firearms during commission of a crime as presently handled by Senator Democratic Leader Mike Mansfield makes sense.

All legislation involving firearms and violence has been handled by panic-stricken lawmakers who have taken away guns from the law-abiding and stiff prison terms for the use of firearms in the commission of a crime. This is all the so-called firearms control laws enacted.

The Mansfield bill would require from 10 to 25 years for first offenders and 25 years for second offenders. Mansfield terms these mandatory sentences. This is not the last time the legions imposed on the crime itself.

The mandatory and additional prison sentence might well be extended to cover persons convicted of using any deadly weapon (knife, loaded, unloaded or boy, knives or blackjacks), in the commission of a crime. After the victim’s head or pierced heart can be just as deadly as a bullet wound.

Cost of Blood Covered by Medicare

When a patient is so critically ill that he doesn’t seem to pull through, it helps to know that med­ ical care will be available. If there is an acute need for blood and one is not available, the blood may be drawn from the patient.

There are several factors to consider in determining whether a patient will be able to receive the blood he needs. The most important of these is the patient’s availability.

If a patient is available, then it is possible to consider the blood group which has been a partner in the patient’s red blood cells.

If the availability of the patient’s blood group is known, the patient’s blood group will be drawn from his own blood.

The availability of the patient’s blood group is not always possible. If the patient’s blood group is not available, then it is possible to consider the blood group of the patient’s relatives.
